capzlog.aero Successfully Closes Public Funding Round Within Just 2.5 Weeks

Zurich, Switzerland – 19 May 2026

capzlog.aero, the Swiss digital pilot logbook platform, has successfully completed its latest public funding round on OOMNIUM AG after reaching the campaign limit within just 2.5 weeks. The CHF 850,000 funding threshold was reached in just 13 days. The remaining shares were fully subscribed shortly after, bringing the total to CHF 1.2 million.

The strong response from investors and the aviation community marks another milestone for the Zurich based aviation software company, which has established itself as one of Europe’s leading platforms for digital pilot logbooks and flight data management.

“This support from the community sends a very strong signal to us,” said Philippe Müller, CEO and Co Founder of capzlog.aero. “For many pilots, capzlog.aero has become part of their aviation journey. Seeing this level of trust and engagement motivates us enormously for the next phase of development.”

The newly raised capital will primarily be used to accelerate product development, further improve existing features, and expand new functionalities around digital pilot records, compliance, and aviation data services.

capzlog.aero currently serves thousands of pilots and operators with a structured, EASA aligned digital logbook platform designed for professional and private aviation alike. The company has gained international attention through its regulatory acceptance work and its integrations with operators, flight schools, and aviation software providers across Europe.

According to the company, the funding round was not only financially successful but also demonstrated the growing demand for modern, data driven digital infrastructure within aviation.
