

Bartolini Air selects capzlog.aero as its digital pilot logbook partner

Łódź, Poland / Zurich, Switzerland – 2 July 2026

Bartolini Air, one of Europe's leading pilot training organizations, and capzlog.aero signed a cooperation agreement at the end of June, establishing capzlog.aero as Bartolini Air's digital pilot logbook partner. The collaboration marks another important step toward the digitalization of pilot training by integrating professional digital pilot logbooks directly into the student training experience.

As part of the partnership, Bartolini Air will offer all student pilots their first year of the capzlog.aero Premium subscription at no additional cost, giving them access to a professional digital pilot logbook from the very beginning of their flight training. This allows students to build complete and structured flight records from day one while familiarizing themselves with a tool they can continue using throughout their aviation careers.

A key element of the cooperation is the technical integration between Bartolini Air's flight training management system and the capzlog.aero platform through a dedicated API. Flight information generated during training will be transferred directly into each student's digital pilot logbook, significantly reducing manual data entry, improving data quality, and streamlining record keeping for both students and instructors.

Maintaining an accurate pilot logbook is an essential part of every pilot's career, from initial license applications to airline recruitment and recurrent training. By integrating digital record keeping into its training program, Bartolini Air is providing students with a modern, efficient, and compliant solution from the very beginning of their aviation journey.

"We are delighted that Bartolini Air has chosen capzlog.aero as its digital pilot logbook partner," said **Philippe Müller, CEO and Co-Founder of capzlog.aero**. "Integrating the logbook directly into the training process creates a seamless experience for students while significantly reducing administrative effort. As Europe's first and currently only officially EASA FCL.050-certified digital pilot

logbook, capzlog.aero enables flight schools and pilots to embrace digital record keeping with confidence.”

Bartłomiej Walas, CEO of Bartolini Air, added: “At Bartolini Air, we continuously invest in modern technologies that enhance the quality of our training. By offering our student pilots the first year of capzlog.aero Premium and integrating our systems through the API, we are providing future pilots with a professional digital pilot logbook that supports them throughout their entire aviation careers.”

The partnership reflects the shared commitment of both organizations to innovation, operational efficiency, and the continuous improvement of pilot training. By combining Bartolini Air’s renowned flight training with capzlog.aero’s certified digital pilot logbook and automated flight data integration, students benefit from a seamless digital workflow that reduces administrative workload while ensuring high-quality, compliant flight records.

About Bartolini Air

Bartolini Air is a leading European Approved Training Organization (ATO) based in Łódź, Poland. The academy offers integrated and modular pilot training programs for students from around the world and has established a strong reputation for preparing highly qualified commercial pilots for careers in the aviation industry.

About capzlog.aero

capzlog.aero is a Swiss aviation software company developing digital solutions for pilots, flight schools, and aircraft operators. Its flagship product is Europe’s first and currently only officially EASA FCL.050-certified digital pilot logbook, enabling compliant digital flight record keeping through automated flight imports, license management, advanced reporting, and comprehensive pilot record solutions. Trusted by thousands of pilots across Europe, capzlog.aero is helping shape the future of digital aviation documentation.
